

Executive Summary – FNP Sales Analysis

- **Project Overview**

The FNP Sales Analysis project analyzes sales performance, customer spending, product categories, occasions, order timing, monthly trends, city-wise orders, and delivery performance. The dashboard provides a consolidated view of key business KPIs and helps identify important sales patterns.

- **Key Performance Indicators**

- **Total Orders:** 1,000
- **Total Revenue:** ₹35,20,984
- **Average Customer Spending:** ₹3,520.98
- **Average Order-Delivery Time:** 5.53

- **Key Insights**

- **Revenue by Occasion:** Anniversary and Raksha Bandhan generate relatively high revenue, while Diwali and Valentine's Day show comparatively lower revenue in the displayed analysis.
- **Revenue by Category:** Colors is the highest-revenue category, followed by Soft Toys and Sweets, while Mugs, Plants, and Cakes contribute comparatively less.
- **Revenue by Hour:** Revenue varies throughout the day, with relatively strong performance during the evening hours, particularly around 19:00–20:00.
- **Revenue by Month:** Revenue shows considerable monthly variation, with notable peaks in February and August, indicating seasonal and occasion-based purchasing patterns.
- **Top Products:** Magnum Set generates the highest revenue among the displayed top five products, followed by Quia Gift.
- **Top Cities:** Imphal records the highest number of orders among the displayed top 10 cities, followed by Dhanbad.

- **Quantity vs. Delivery Time:** The correlation coefficient is **0.003478174**, which is very close to zero. This indicates a **negligible/neutral linear relationship** between order quantity and delivery time. Therefore, quantity alone does not appear to explain variations in delivery time.

• Recommendations

1. **Focus on high-performing categories:** Promote Colors, Soft Toys, and Sweets while reviewing the performance of lower-revenue categories.
2. **Strengthen occasion-based campaigns:** Plan targeted promotions around high-performing occasions and seasonal periods.
3. **Optimize evening promotions:** Consider scheduling marketing campaigns and offers during high-revenue evening hours.
4. **Promote high-performing products:** Maintain sufficient inventory and promotional visibility for products such as Magmom Set and Quia Gift.
5. **Use city-wise insights:** Focus distribution and marketing efforts on cities generating higher order volumes.
6. **Improve delivery analysis:** Since quantity has almost no correlation with delivery time, investigate other factors such as delivery location, distance, order time, and operational workload.

• Conclusion

The FNP Sales Analysis dashboard provides a clear overview of revenue, orders, customer spending, product performance, seasonal trends, occasions, geographical demand, and delivery operations. The analysis helps identify major revenue contributors and customer purchasing patterns while highlighting areas where further operational analysis can improve business performance.
